PREPARTICIPATION PHYSICAL EVALUATION MEDICAL HISTORY

This **MEDICAL HISTORY FORM** must be completed annually by parent (or guardian) and student in order for the student to participate in **TAPPS** athletic activities. These questions are designed to determine if the student has developed any condition which would make it hazardous to participate in an athletic event.

CONCUSSION AND TRAUMATIC BRAIN INJURY

What is a concussion?

A concussion is a brain injury that:

- Is caused by a bump, blow, or jolt to the head or body
- Can change the way a student's brain normally functions
- Can occur during practice or contests in any sport
- Can occur in activities both associated and not associated with the school
- Can occur even if the student has not lost consciousness
- Can be serious even if a student has just been "dinged" or had their "bell rung"

Are the symptoms of a concussion?

Concussions cannot be seen; however, in a potentially concussed student, one or more of the following symptoms may become apparent. The student may not "feel right" soon after, a few days after or even weeks after the injury event.

Headache	"Pressure" in the head	Nausea	Vomiting
			C
Balance problems	Dizziness	Blurry Vision	Double Vision
Sensitivity to Light	Sensitivity to Noise	Confusion	Memory Problems
Difficulty paying attention	Feeling chaggish hazy for	ay or arongy	

Difficulty paying attention Feeling sluggish, hazy, foggy or groggy

If you have concerns regarding any of the above symptoms, your doctor should be consulted for further information and/or examination. Your physician or medical professional can best determine your student's physical condition and ability to participate in athletics.

What should students do if they believe that they or someone else may have a concussion?

- Students should immediately notify their coach or school personnel.
- Student should be examined by appropriate medical personnel of the parent's choosing. The medical provider should be trained in the diagnosis and treatment of concussions
- If no concussion is diagnosed, the student shall be cleared to return to athletic participation.
- If a concussion is diagnosed, the school protocol for return to play from a concussion shall be enacted. Under no circumstances shall the student be allowed to return to practice or play without the approval of a licensed medical provider trained in the treatment of concussions.

I have reviewed the above material. I understand the symptoms and warning signs of CONCUSSIONS. Additional information is available on the Health and Safety page at www.tapps.biz. All concussions should be reported to the school as soon as possible. Previous concussions should be reported on the Medical History form to allow the medical practitioner the best information possible when conducting the annual physical examination.

CONCUSSIONS – Don't hide it. Report it. Take time to recover.

SUDDEN CARDIAC ARREST

What is Sudden Cardiac Arrest (SCA)?

Sudden Cardiac Arrest is when the heart stops beating, suddenly and unexpectedly. When this happens blood stops flowing to the brain and other vital organs. SCA is not a heart attack. A heart attack may cause SCA, but they are not the same. A heart attack is caused by a blockage that stops the flow of blood to the heart. SCA is a malfunction of the heart's electrical system, causing the heart to stop beating.

How common is Sudden Cardiac Arrest?

While studies differ in the actual rate of occurrence, the American Heart Association information indicates that there are approximately 300,000 SCA events outside hospitals each year in the United States. About 2000 patients under the age of 25 die of SCA each year. Studies now being performed in Texas and other states indicate the occurrence rate for high school age athletes may be greater than this figure.

Are there warning signs?

Although SCA happens unexpectedly, some people may have signs or symptoms, such as:

Dizziness

Fatigue

Lightheadedness

Extreme tiredness Shortness of breath Nausea

Difficulty breathing Vomiting Racing or fluttering heartbeat

Chest Pains Syncope (fainting)

These symptoms can be confusing and unclear in athletes. Often people confuse these warning signs as physical exhaustion. SCA can be prevented if the underlying causes can be diagnosed and treated.

For this reason these symptoms are included on the Medical History form provided by TAPPS and required for each student prior to participation in athletic events each year. As parents and student athletes, your truthful answers to these simple questions will assist your medical practitioner when performing the annual physical examination.

What are the risks of participation and playing with these symptoms?

Continued participation brings with it increased risk. This includes playing in practices and games. When the heart stops, so does the blood that flows to the brain and other vital organs. Death or permanent brain damage can occur in just minutes. Most people who experience a SCA die from the event.

While TAPPS does not mandate Cardiac Screening prior to participation, TAPPS and the TAPPS member schools recognize the importance of our students' health and highly recommend discussing screening options with your healthcare provider. Any student who shows signs of SCA should be removed by the parents from play. This includes all athletic activity, practices or contests. Before returning to play, the student should be examined and receive clearance by a licensed health care professional of the parents' choosing.

I have reviewed the above material. I understand the symptoms and warning signs of SCA. Additional information is available on the Health and Safety page at www.tapps.biz.
